## Executive Summary:

Adventurous **hopeful UX designer / software engineer** driven to improve people's lives and reinvent industry-changing products. Some people think or all-roundedness in a job is lack of expertise, but I believe **simplicity** in software design is key. I honestly love experimenting and building upon what others have already done (yay open-source), but fantasizes the impossible ideations and crazy brainstorming to solve day-to-day problems, hardware and software.

I love the idea of design thinking, user-centric, **people-centric designs** and creative innovations, genius design patterns, I really want to live breathe eat innovation if I could. If I can't do it (yet), I'll learn and do it.

---

## Academic Experience:

In-depth: [Java \(Object Oriented Programming\)](#); [IntelliJ \(IDE\)](#)

Learning: GitHub Pages, Telegram Bot, Software design patterns

Familiarity in: Software Engineering methodology (Agile Method),  
User-Centric Design (2 years),  
Arduino side projects, GitHub

Interests: Full-stack development Web / Mobile Applications, UI/UX Design,  
Reddit, Open-source Projects

## **Non-Academic Experience:**

### **Industrial experience: 2 Months**

*May 2018 – July 2018: Software Engineering Summer Intern – Optimai Pte Ltd*

**Developed API calls** and carried out user-side testing of a web application. Read codebase and crafted UML notations to document developer guide for the team.
